

# OLD MUTUAL TRAINING PROGRAM

This training program is designed by the Sports Science Institute of South Africa for intermediate athletes aiming to run a 10 km running race.

## Only complete the intermediate level training program:

- If you have 1 - 5 years of running experience.
- Have a 10 km running time of less than 40 - 49 minutes.
- Are able to run 3 - 4 times a week.

## UNDERSTANDING THE TRAINING PROGRAM

ABBREVIATION	TERM	DESCRIPTION
WU	Warm Up	<ul style="list-style-type: none"> <li>• Take the first 2 – 3 km of each workout to warm the muscles up.</li> <li>• Start slow and assess how your body feels.</li> <li>• Sometimes there may be a hard run on the schedule, but even by the end of the warm up you may still be feeling tired and heavy-legged. In this case it will be better to NOT go ahead and do the hard workout.</li> </ul>
LSD	Long Slow Distance	<ul style="list-style-type: none"> <li>• Long slow distance runs are essential to preparing for endurance running events.</li> <li>• They should simulate race conditions as closely as possible (temperature, terrain, hills, etc.).</li> </ul>
SPD	Speed	<ul style="list-style-type: none"> <li>• These sessions will include short bouts of high intensity intervals.</li> <li>• These workouts will help improve your ability to surge at necessary points in the race such as the finish and when passing competitors.</li> </ul>
E	Easy	<ul style="list-style-type: none"> <li>• An “easy” pace run is one done at a speed where it takes no effort at all, you look around, you can chat if you are running with someone.</li> </ul>
M	Moderate	<ul style="list-style-type: none"> <li>• This running speed is just a bit faster than “easy”.</li> <li>• A little input of effort; don’t want to talk quite so much; and have to concentrate a bit on the running pace.</li> </ul>
H	Hard	<ul style="list-style-type: none"> <li>• This requires a big input of effort, relative to the distance (so “hard” for 5 km is a bigger effort input than “hard” for 10 km, for example).</li> <li>• Lots of concentration required, breathing very hard, certainly would not want to talk; looking forward to when you can slow down.</li> </ul>

A note on training zones:	RPE	ZONES
Depending on the coach, training plan, or equipment you use – training zones will differ. This plan uses RPE as a guide to intensity.  If you do choose to train with zones, this table which gives you some basic guidance on which RPE level corresponds with specific zones.	1	Z1
	2	Z1
	3	Z2
	4	Z2
	5	Z3
	6	Z3
	7	Z4
	8	Z4
	9	Z5
	10	Z5

ADVICE ON A SUCCESSFUL TRAINING PLAN	STRENGTH TRAINING	SIGNS THAT YOU NEED A REST DAY
	Strength training 3 times a week for 15 - 20 minutes helps athletes avoid overuse injuries and improves muscle imbalances.	<ul style="list-style-type: none"> <li>• Impaired performance that does not improve with 2 - 3 days of rest</li> <li>• A feeling of heavy, slow, tired legs or arms that does not improve with 2 - 3 days rest</li> <li>• Trouble sleeping</li> <li>• Sudden loss of appetite</li> <li>• Cranky mood</li> <li>• Flu-like symptoms</li> </ul>

**GOOD LUCK**

This training program has the elements for you to succeed, it is a packaged training plan designed for athletes training for a 10 km. If you would like a plan catered to your specific physiology, time constraints, and goals, the Sports Science Institute offers personalised coaching services.
